

Willow Brook Travel Policy

(Effective March 1, 2021)

While travel via airplane and to areas where there is a large concentration of COVID-19 cases is still discouraged, the COVID-19 vaccination should provide 95% protection two weeks after the second dose of the vaccine.

With that in mind, we've revised the Willow Brook travel policy. As of March 1, 2021, those who have received both doses of the COVID-19 vaccination at least two weeks previously may travel without the need for the 14-day quarantine before returning to work.

Those who have not been vaccinated still will need to quarantine for 14 days upon return from travel before coming back to work. This will help us protect residents and staff.
